

COVID-19 AND THE PERCEPTIONS OF ENGLISH-SPEAKING QUEBECERS

QUEBEC COMMUNITY GROUPS NETWORK AND THE
ASSOCIATION FOR CANADIAN STUDIES

MAY 11, 2020

METHODOLOGY

The Quebec Community Groups Network and the Association for Canadian Studies commissioned the firm Léger Marketing to conduct a Web survey using computer-assisted Web interviewing (CAWI) technology. The survey was conducted from May 1 to May 6, 2020, some 1638 Quebecers 18 years of age or older, randomly recruited from LEO's online panel. (The survey included the largest sample of English-speaking Quebecers conducted to date with 694 respondents).

Using data from the 2016 Census, results were weighted according to gender, age, mother tongue, region, education level and presence of children in the household in order to ensure a representative sample of the population.

No margin of error can be associated with a non-probability sample (Web panel in this case). However for comparative purposes, a probability sample of 1515 respondents would have a margin of error of $\pm 2.52\%$, 19 times out of 20, while a probability sample of 1,012 would have a margin of error of $\pm 3.08\%$, 19 times out of 20.

The research results presented here are in full compliance with the CRIC Public Opinion Research Standards and Disclosure Requirements.

QUEBEC ALLOPHONES AND ANGLOPHONES ARE MORE AFRAID OF GETTING THE VIRUS THAN QUEBEC FRANCOPHONES

Are you personally afraid of contracting the COVID-19 (Coronavirus)?
